the main data both the Davangere Reservoir with the result that both the Water Works of Davangere and Haribar towns may be amalgamated temporarily for a period of about 5 years without prejudice to the adequate supply of water to the Davangere town.

The financial aspect of the proposed arrangement ~~as regards Davangere only~~ is ~~summarised~~ as given below:

The total quantity of water consumed in the Haribar mufly during 1917-18 was 15.34 million gallons and the expenditure incurred therefor amounted to Rs 5061/-.

Taking this consumption as the basis for purpose of calculation and if water is taken from the Davangere rising main for distribution to Haribar town, it will be found that Haribar will have to pay at the rate of 4 annas per 1000 gallons, Rs 3,835/- and allowing an additional sum of Rs 1000/- for repairs of pipes and other incidental charges the total expenditure will come up to Rs 4900/-. If with this be seen that the Haribar mufly will save on record Rs 300/- per year besides the depreciation charges on the machinery and

get a much purer water in addition.

2) By the sale of 15.34 million gallons of water to Karachi Municipality, Davanpore Municipality will get an additional income of Rs 3835/ per annum deducting the likely additional expenditure that will devolve upon the Davanpore Municipality by the proposed amalgamation, viz Rs 2750/-, there will be a net saving of Rs 85/

6855

From the above it is seen that from the proposed arrangement there will be no extra cost to Govt and the existing staff attached to the Davanpore Pumping Station is reported to be quite enough to meet the altered situation also

Davanpore Municipality are not in favour of the proposed amalgamation inspite of repeated request made to them in the matter while the Karachi Municipality have agreed to the proposal and are ready to pay the charges for the quantity of water supply to them from

Submitted for orders Both the Water Works of Davanpore & Karachi are still under the control of the P W D. If approved the Chief Engr may also be consulted W.D. in the matter

Darjeeling Railway is being managed by the P.W.D. The Plant itself is the property of the Rail Co No doubt the attitude of the Rail Co in the matter of helping the Sikkim Railway of Darjeeling is unfavourable as the President says but it is difficult to see how Govt can set aside the decision of the Rail Council and give assistance to Darjeeling interfering with the Plant belonging to Darjeeling

If this point is settled, it may then be necessary to consult the Chief Engr as regards the technical aspects of the case The Exec Engr's report is very clear

12-4-19

worked & Sec 176 cl (b). If the water works had been constructed entirely out of Govt funds, then there would have been scope for resuming the working of the Plant and ordering distribution from Hanibar town also. Now the water supply plant belongs to the mills and unless they consent, it is somewhat difficult to enforce the undertaking of the Hanibar water supply also. If the mills had consented, Sec 52, proviso under cl (c) would have applied. Then does not seem to be any way out of the difficulty. The Govt advocate may be requested to give his opinion in this connection.

31 Supply arrangement of the water supply from Hanibar dam is not kept in an efficient condition, leakage is found to be much and the Dewangere Dam will be threatened with an act breach, because the water supply will become discontinued. Suppose the Municipal Council of Dewangere becomes defaulter and does not consent to attend the Hanibar Municipality's enquiry & the water supply has not to be resumed from Dewangere and the Dewangere Municipality from commencing its work. Govt Advocate should be consulted upon these points.

30 Section 176 of the Municipal Act does not lay down that the entire cost of construction of any work of a permanent nature should have been borne by the Government to enable them to resume it from any Municipality in any special case, and this applies to any work constructed even outside Municipal limits. The provisions of the regulation make it clear that the Government have a sort of a disciplinary jurisdiction over all Municipalities. There does not therefore appear to be any legal objection for the Government to resume the Waterworks from the Municipal Council of Davangere, in case they disregard any necessary and reasonable directions or requisitions from Government

at ~~Rs~~ as per 1000 gallons

The resolutions of both the municipal Councils also have been submitted by As per resolution of the Davangere municipal Council, the amalgamation may be effected provided the Harihar municipality Contributes Rs. 5000 per which is the same amount as is now incurred for supplying their town with an average of 46,000 gallons daily any excess over this average also being charged for Further the amalgamation should not be continued for more than 18 months

In regard to the above resolution, the Harihar municipal Council have resolved as follows :—

(1) This municipal Council offer to Contribute only a sum of Rs 3960 towards the charge at the rate of 4 as per 1000 gallons as previously proposed by the Executive Water Supply Dept

(2) The charge proposed by the Davangere municipal Council is excessive as Davangere Water Works are nearer to Harihar & the working charges for the supply of water to the Harihar town must be much less than for the other town

(3) Since the amalgamation is to be only temporary the pumping are alleged to

Council. The meeting was convened on 31st January 1919 but for want of quorum it had to be adjourned. The question was again brought before the Municipal Council on 19th February 191 when the Executive Engineer, Water Supply Division was also present and explained to the Council the urgent necessity for the proposed temporary amalgamation of the two water works with the result that the municipal council again differed from this view

The President inhis letter No.300 dated 25th February 1919 furnishes the average figures showing the quantity of water required for the use of the Davangere town and explains how the requirements of Harihar town could also be met with without any prejudice whatever to the present and even the prospective requirements of Davangere. He is of opinion that in the circumstances explained by him. the two water works may be amalgamated as proposed by the Executive Engineer, Water Supply Division and relief afforded to the much needed sister municipality of Harihar

If the proposal of the Executive Engineer, Water Supply Division as supported by the President of Davangere Municipality could effectively be carried out without prejudice to the interest of the Davangere water supply and in the event of the Harihar municipality bearing the financial responsibility which the proposed scheme is about to bring on them, I can really see no reason why the Davangere municipal council should hesitate to allow their neighbours to avail themselves temporarily of the advantages of the proposal. The apprehension of the Davangere Municipal Council that the proposed amalgamation would affect their water supply seems to be altogether unfounded under the circumstances explained both by the Executive Engineer and the President of the Davangere Municipality.

Much difficulty is now stated to be experienced on account of the old and worn out machinery of the Harihar water works and the consequen diminution in the supply of water

As no remedial measures are possible just now to improve matters and in view of the fact that the Davangere water works

had the generous support of Government to the extent of nearly half a lakh of rupees mainly contributed from the State Funds.-

I request that the proposed amalgamation as suggested by the Executive Engineer, Water supply Division may be accepted by Government in the light of these explanations and necessary orders passed at an early date.

The copy of the President's letter referred to above, together with copies of the resolutions of the Harihar and Davangere Municipal Councils and a copy of the note on Harihar Water supl by the Executive Engineer, Water Supply Division are herewith submitted for favor of perusal.

I have the honor to be,

S i r,

Your most obedient servant,

Deputy Commissioner

Chitaldrug District.

S.V.

Letter No. 300 dated 25-2-1919 from the President, Davangere Municipality to the Deputy Commissioner, Chitaldrug District.

With reference to your No. A dated 27th January 1919 suggesting to arrange for a special meeting of the Municipal Council of Davangere and to invite the representatives of Harihar and also the Executive Engineer, Water Supply Department, to be present at the said meeting for discussing the question of amalgamating the water works of Harihar with those of Davangere, I have the honor to state that a special meeting arranged on the 31st January 1919 had to be adjourned for want of quorum. The Executive Engineer, Water Supply Department was not able to attend this meeting but the representatives of Harihar who had come to attend the meeting exchanged views with the municipal councillors and other leading men of Davangere who were present at the time.

Again the matter was placed before the Municipal Council of Davangere in their general meeting held on 19th February 1919, when Mr S Srinivasa Iyer, the Executive Engineer, Water Supply Department, who was at my request, present at the meeting, explained to the Council the necessity of amalgamating at least temporarily the Harihar Water works with those of Davangere and suggested the lines on which the same can be worked out The council still hold the same opinion as resolved in their last meeting held on 15th January 1919 and are not in favor of amalgamating the water works of the two towns

A copy of the resolution of the municipal council in the matter is herein enclosed.

The average daily consumption of the town of Davangere as per information furnished by the Executive Engineer is 80000 gallons of water It was calculatedthat about 25000 gallons of water per day would be required for the extensions of the town and about 45000 gallons for the use of Factories Thus the total quantity of water required for the town of Davangere comes up to 150000 gallons per day taking into account also the future requirements of the town The quantity may be still less, as all the factories do not require the same quantity of water and evenly throughout the year, since they work only for a season The pumps of Davangere water works are said to work at present daily 8 hours on ordinary days and 10

hours in the summer season and the working capacity of the pumps is 11000 gallons per hour To supply water to Davangere town as calculate above, the pumps will have to work nearly 13 hours a day

The quantity of water required for consumption at Harihar town is about 35000 gallons per day and the same can be supplied with only 3 hours extra working of the pumps of Davangere water works.

With 16 hours pumping both the towns of Davangere and Harihar can be supplied with water without any inconvenience to the town of Davangere for its future requirements.

The amalgamation of the two water works is proposed only temporarily to enable the municipal council of Harihar to improve their water works as suggested by the Executive Engineer in his notes on water supply to Harihar town and improve their finances.

Under these circumstances the refusal of the Municipal council of Davangere to supply water to the neighbouring town of Harihar temporarily when it is in need of their help, seems to be rather ungenerous

I am of opinion that the proposed amalgamation of the water works of the two towns may be effected temporarily, the Harihar Municipality paying working charges for the quantity of water supplied to their town and when the requirements of the Davangere town do not allow the supply of water to other places, the question of stopping supply of water to Harihar may be considered again

The Municipal Council of Harihar town have agreed to the proposal of amalgamation and a copy of the resolution passed by them in their meeting held on 28th January 1919 is herein enclosed.

NOTES ON WATER SUPPLY TO HARIHAR TOWN

The present condition of water supply to the town of Harihar is not quite satisfactory The pump which was purchased at the time of water supply installation some 10 years back, has lost much in efficiency. In spite of repairs carried out it is not able to deliver more than 2500 to 3000 gallons per hour As the consumption of water in the town is on an average to 35 to 44 thousand gallons per day, the engine and the pump have to be worked nearly 10 to 14 hours a day and during days of festivals, jatras etc pumping has to go on all the 24 hours.

There is provision for only one driver in the estimate for annual maintenance of the water works, the present driver is therefore working for nearly 14½ hours a day on ordinary days and longer on special occasions It is quite unreasonable to make him work such long hours, the average shiftfor a driver and staff is generally 8 hours In spite of the driver working such long periods at a stretch, the supply to the town is reported by the town people to be unsatisfactory. There are complaints almost always of inadequate supply

The water before it is supplied to the town is passed through a pressure Jewell Filters Though these filters are good enough under ordinary conditions for supply to small towns it is found that these are not quite capable of satisfactorily dealing with the extremely turbid waters which the Tungabhadra carries very often during the monsoon. The water after filteration does not present the clear appearance that should be exhibited

It is thus found necessary to improve both the quality and the quantity of the water supply to the town. The only satisfactory arrangement will be to have an elevated reservoir to contain about 50000 gallons at the Travellers' Bungalow ridge from which to givethe distribution, water being pumped into this reservoir from a pure water tank to be built near the existing engine house. This would give a good supply of water to the town under pressure The quality of the water could be improved only if a gravity filter is installed with its adjuncts of settling and pure water tanks

Owing to the unsettled state of the iron market, it is not possible to give anything like a correct idea of what these would cost It is

B a n g a l o r e.

I R,

Adverting to your letter No 12307-M1 39-18- dated 25th March 1919 enclosing a copy of the telegram from the people of Harihar in the matter of water supply to their town, and calling for a report as to what relief if any, is required and is possible in this connection, I have the honor to invite reference to my letter No.Ref. C.227/M1.of 18-19 dated 31st March 1919 and to state that the only possible means of relief that could be afforded at present to the people of Harihar, appears to be the temporary amalgamation of the water works of Davangere and Harihar as recommended in the letter above

The Executive Engineer, water Supply Division and the President of the Davangere Municipality have both tried to convince the Municipal Council of Davangere, of the urgent necessity of the proposed amalmagation without prejudice to the interest of the Dagangere Municiprlity in spite of this the latter have failed to realize the difficulties of their neighbours, which can be easily be got over by the proposed amalgamation being brought about

I therefore request that in view of the circumstances explained in my letter referred to above, The Government may be pleased to accept the proposal and to issue necessary orders at an early date

I have the honor to be,
S I R,
Your most obedient servant,

XXX. Deputy Commissioner's memo No.C.[illegible]27LL.of 1918-19 dated 4/8/1919, forwarding letter-No.R.1648/M1 187-18-4 dated 30/7/1919 from the Revenue Secretary to Government, re-Temporary amalgamation of Harihar & Davanfere Water -works:-

Resolved that the temporary amalgamation of the Harihar & Davangere Water works may be effected under the circumstances, provided the Harihar Municipality contributes to the Davangere Water works the amount now incurred for supplying the town with an average of 44000 gallons of water daily viz., Rs.5000/- and proportionately for any excess over this average-Owing to the expansion of Davangere and its growing requirements of water for house connections, drains, roads & factories, the amalgamation should not be continued for more than 18 months within which time the Harihar Municipality should be required to undertake to provide themselves with the necessary pumping plant & disconnect the temporary amalgamation. A metre for recording the supply of Harihar town should be installed.

The Cost of pumping 1000 gallons into the reservoir at Davangere is taken at 0-5-0

The Head, while pumping into the Davangere reservoir is 320 but if the water is pumped into the tanks at Harihar it would probably not go above 100 Since this difference affects the Co quantity of fuel requires etc it was proposed that a rate of 4-0 per 1000 gallons might be paid by Harihar municipality.

The actual working charges cannot be given as there was no occasion when water was supplied to Harihar from the Davangere plant
